MTB PCR (585)

(Method: Real Time PCR)

SPECIMEN

BLOOD

RESULT

MTB DNA PCR

POSITIVE

INTERPRETATION

A Positive result for both Mycobacterium genus and M.Tb complex (M.tuberculosis, M.africanum, M.bovis, M.bovisBCG, M.microti, M.pinnipediim.tuberculosis, M.bovis, M.microti) indicates that the sample provided contains bacilli belonging to M.Tb complex.

A Positive result only for Mycobacterium genus indicates that the sample provided contains bacilli belonging to Mycobacteria other than tuberculosis (MOTT).

A Negative result indicates that either the sample provided/sample processed does not contain Mycobacteria or has bacilli below the detection limit of the assay.

--- End of the Report ---

Disclaimer:

All laboratory test results must be interpreted within the context of overall health of the patient and should be used along with other tests and clinical findings. Laboratory test results may vary depending upon age, sex, time of sample collection, diet, medication and physiological variations
