Test	Result	Units	BiologicalReferenceInterval
DEPARTMENT OF MOLECULAR BIOLOGY - CSF			
ORBITO MENINGOENCEPHALITIS (1223) <i>(Method: Nested Multiplex PCR)</i>			
Sample Type	CSF		
BACTERIA			
Escherichia coli K1	NOT DETECTED		
Haemophilus influenzae	NOT DETECTED		
Listeria monocytogenes	NOT DETECTED		
Neisseria meningitidis (encapsulated)	NOT DETECTED		
Streptococcus agalactiae	NOT DETECTED		
Streptococcus pneumoniae	NOT DETECTED		
VIRUSES			
Cytomegalovirus (CMV)	NOT DETECTED		
Enterovirus (EV)	NOT DETECTED		
Herpes Simplex Virus 1 (HSV-1)	NOT DETECTED		
Herpes Simplex Virus 2 (HSV-2)	NOT DETECTED		
Human Herpesvirus 6 (HHV-6)	NOT DETECTED		
Human Parechovirus (HPeV)	NOT DETECTED		
Varicella Zoster Virus (VZV)	NOT DETECTED		
YEAST			
Cryptococcus neoformans/gattii	NOT DETECTED		
REMARKS			
<p>The Meningitis/Encephalitis (ME) Panel is a qualitative multiplexed nucleic acid-based in-vitro diagnostic test and ME Panel is capable of simultaneous detection and identification of multiple bacterial, viral, and yeast nucleic acids directly from Cerebrospinal fluid (CSF) specimens obtained via lumbar puncture from individuals with signs and/or symptoms of meningitis and/or encephalitis..</p> <p>Note:</p> <ol style="list-style-type: none"> 1. Non-K1 E. coli serotypes may be present in a specimen and will not be detected. 2. Non-encapsulated strains of Neisseria meningitidis are not detected. 3. Patients with a suspicion of cryptococcal meningitis and a negative cryptococcal PCR result, should be tested for CrAG (Serum Cryptococcal Antigen). 4. Results should always be interpreted in conjunction with other clinical, laboratory, and epidemiological information. 5. If detected results are reported for 2 or more organisms in a specimen, a retest of the specimen is recommended to confirm the polymicrobial result. 			
INTERPRETATION

Test	Result	Units	BiologicalReferenceInterval
------	--------	-------	-----------------------------

DETECTED: Indicates organism detected and identified is likely causing symptoms of disease. Co-Infection by more than one organism is not uncommon. However it does not distinguish between a viable or replicating organism and the presence of a nonviable organism or nucleic acid, nor do they exclude the potential for co-infection by organisms not contained within the panel.

NOT DETECTED: Indicates organism tested in the panel were not detected and the symptoms may be caused by a condition other than an infection or a pathogen that was not tested for. Also negative results may be in concentrations below the level of detection by this assay or organisms are not included in this panel.

---End of the Report---

Disclaimer :

All laboratory test results must be interpreted within the context of the patient and should be used along with other tests and clinical findings. Laboratory test results may vary depending upon age, sex, time of sample collection, diet, medication and physiological variations.
